The recognition of losses at origination or acquisition represents the Company’s best estimate of the lifetime expected credit loss associated with a loan given the facts and circumstances associated with the particular loan, and involves the use of significant management judgement and estimates, which are subject to change based on management’s on-going assessment of the credit quality of the loan portfolio and changes in economic forecasts used in the model. The Company uses the weighted average remaining maturity (“WARM”) method when determining estimates for the allowance for credit losses (“ACL”) for each of its portfolio segments. The weighted average remaining life, including the effect of estimated prepayments, is calculated for each loan pool on a quarterly basis. The Company then estimates a loss rate for each pool using both its own historical loss experience and the historical losses of a group of peer institutions during the period from 2004 through the most recent quarter. <span style="background-color: rgb(255, 255, 255); font-weight: normal; color: rgb(0, 0, 0); font-family: 'Times New Roman'; font-size: 10pt; font-style: normal; font-variant: normal; text-transform: none;">

Qualitative adjustments may include, but are not limited to, factors such as: (i) changes in lending policies and procedures, including changes in underwriting standards and collections, charge offs, and recovery practices; (ii) changes in international, national, regional, and local conditions; (iii) changes in the nature and volume of the portfolio and terms of loans; (iv) changes in the experience, depth, and ability of lending management; (v) changes in the volume and severity of past due loans and other similar conditions; (vi) changes in the quality of the organization’s loan review system; (vii) changes in the value of underlying collateral for collateral dependent loans; (viii) the existence and effect of any concentrations of credit and changes in the levels of such concentrations; and (ix) the effect of other external factors (i.e., competition, legal and regulatory requirements) on the level of estimated credit losses. These qualitative factors incorporate the concept of reasonable and supportable forecasts, as required by ASC 326. <span style="background-color: rgb(255, 255, 255); font-weight: normal; color: rgb(0, 0, 0); font-family: 'Times New Roman'; font-size: 10pt; font-style: normal; font-variant: normal; text-transform: none;">

For the nine months ended September 30, 2024, the Company recorded a provision for credit losses of $1.2 million, compared to $808 thousand for the nine months ended September 30, 2023. The provisions for credit losses during the third quarter and nine months ended September 30, 2024 include recoveries of provisions for credit losses for off-balance sheet loan commitments of $24 thousand and $26 thousand, respectively. The increases in the provisions for credit losses during the three and nine months ended September 30, 2024 were primarily due to growth in the loan portfolio.

Collective evaluation is based on aggregating loans deemed to possess similar risk characteristics. In certain instances, the Company may identify loans that it believes no longer possess risk characteristics similar to other loans in the loan portfolio. These loans are typically identified from those that have exhibited deterioration in credit quality, since the specific attributes and risks associated with such loans tend to become unique as the credit deteriorates. Such loans are typically nonperforming, downgraded to substandard or worse, and/or are deemed collateral dependent, where the ultimate repayment of the loan is expected to come from the operation of or eventual sale of the collateral. Loans that are deemed by management to no longer possess risk characteristics similar to other loans in the portfolio, or that have been identified as collateral dependent, are evaluated individually for purposes of determining an appropriate ACL. The Company uses a discounted cash flow approach, using the loan's effective interest rate, for determining the ACL on individually evaluated loans, unless the loan is deemed collateral dependent, which requires evaluation based on the estimated fair value of the underlying collateral, less estimated selling costs. The Company may increase or decrease the ACL for collateral dependent loans based on changes in the estimated fair value of the collateral.</div> <div> </div> <div> </div> <div> </div> <div style="display:none;">

The ACL for loans that were modified in response to a borrower's financial difficulty is measured on a collective basis, as with other loans in the loan portfolio, unless management determines that such loans no longer possess risk characteristics similar to others in the loan portfolio. In those instances, the ACL for such loans is determined through individual evaluation. There were no loan modifications to borrowers that were experiencing financial difficulty during the three or nine months ended September 30, 2024 or 2023.

For single-family residential, consumer, and other smaller balance homogenous loans, a credit grade is established at inception, and generally only adjusted based on performance. Information about payment status is disclosed elsewhere herein. The Company analyzes all other loans individually by classifying the loans as to credit risk. This analysis is performed at least on a quarterly basis. The Company uses the following definitions for risk ratings: <table cellpadding="0" cellspacing="0" class="DSPFListTable" style="font-family: 'Times New Roman'; font-size: 10pt; width: 100%;"> <tr style="vertical-align: top;"> <td style="width: 27pt;">
  </td> <td style="vertical-align: top; width: 18pt;"> ● </td> <td style="text-align: left; vertical-align: top; width: auto;"> Watch. Loans classified as watch exhibit weaknesses that could threaten the current net worth and paying capacity of the obligors. Watch graded loans are generally performing and are not more than 59 days past due. A watch rating is used when a material deficiency exists, but correction is anticipated within an acceptable time frame. </td> </tr> </table>

 The Company maintains an allowance for credit losses on off-balance sheet commitments related to unfunded loans and lines of credit, which is included in accrued expenses and other liabilities in the consolidated statements of financial condition. The Company applies an expected credit loss estimation methodology for off-balance sheet commitments. This methodology is commensurate with the methodology applied to each respective segment of the loan portfolio in determining the ACL for loans held-for-investment. The loss estimation process includes assumptions for the probability that a loan will fund, as well as the expected amount of funding. These assumptions are based on the Company's own historical internal loan data.

 The allowance for off-balance sheet commitments was $342 thousand and $364 thousand at September 30, 2024 and December 31, 2023, respectively. The recovery of provision for off-balance sheet loan commitments was $24 thousand for the three months ended September 30, 2024 and $26 thousand for the nine months ended September 30, 2024. The provision for off-balance sheet loan commitments was $69 thousand for the three months ended September 30, 2023 and $106 thousand for the nine months ended September 30, 2023.</div> <div style="margin-left: 36pt; text-align: justify;"> Loans receivable held-for investment were as follows as of the dates indicated:</div> <div>

 In connection with the New Market Tax Credit activities of the Bank, CFC 45 is a partnership whose members include CFNMA and City First New Markets Fund II, LLC. This community development entity ("CDE") acts in effect as a pass-through for a Merrill Lynch allocation totaling $14.0 million that needed to be deployed. In December 2015, Merrill Lynch made a $14.0 million non-recourse loan to CFC 45, whereby CFC 45 passed that loan through to a Qualified Active Low-Income Business ("QALICB"). The loan to the QALICB was secured by a Leasehold Deed of Trust that, due to the pass-through, non-recourse structure, was operationally and ultimately for the benefit of Merrill Lynch rather than CFC 45. Debt service payments received by CFC 45 from the QALICB were passed through to Merrill Lynch in return for which CFC 45 received a servicing fee. The financial statements of CFC 45 are consolidated with those of the Bank and the Company.

 There were two notes for CFC 45. Note A was in the amount of $9.9 million with a fixed interest rate of 5.2% per annum. Note B was in the amount of $4.1 million with a fixed interest rate of 0.24% per annum. Quarterly interest only payments commenced in March 2016 and continued through March 2023 for Notes A and B. These notes were paid off during January 2024.

These appraisals may utilize a single valuation approach or a combination of approaches including comparable sales and the income approach. Adjustments are routinely made in the appraisal process by the independent appraisers to adjust for differences between the comparable sales and income data available. Such adjustments are usually significant and typically result in a Level 3 classification of the inputs for determining fair value. During 2022, the ESOP purchased 58,369 shares of the Company's common stock at an average cost of $8.57 per share for a total cost of $500 thousand and during 2023, the ESOP purchased 369,958 shares of the Company's common stock at an average cost of $9.19 per share for a total cost of $3.4 million. These purchases were funded with a $5.0 million line of credit from the Company. The loan will be repaid from the Bank's annual discretionary contributions to the ESOP, net of dividends paid, over a period of 20 years. Shares of the Company's common stock purchased by the ESOP are held in a suspense account until released for allocation to participants. When loan payments are made, shares are allocated to each eligible participant based on the ratio of each such participant's compensation, as defined in the ESOP, to the total compensation of all eligible plan participants. As the unearned shares are released from the suspense account, the Company recognizes compensation expense equal to the fair value of the ESOP shares during the periods in which they become committed to be released. To the extent that the fair value of the ESOP shares released differs from the cost of such shares, the difference is charged or credited to equity as additional paid-in capital. Any dividends on allocated shares increase participant accounts. Any dividends on unallocated shares will be used to repay the loan. Participants will receive shares for their vested balance at the end of their employment. Compensation expense related to the ESOP was $46 thousand and $11 thousand for the three months ended September 30, 2024 and 2023, respectively, and $137 thousand and $33 thousand for the nine months ended September 30, 2024 and 2023, respectively.

Capital amounts and classifications are also subject to qualitative judgments by the OCC. Failure to meet capital requirements can result in regulatory action.

 <div style="text-align: justify; font-family: 'Times New Roman'; font-size: 10pt; text-indent: 36pt; background-color: rgb(255, 255, 255); font-weight: normal; color: rgb(0, 0, 0); font-style: normal; font-variant: normal; text-transform: none;">As a result of the Economic Growth, Regulatory Relief, and Consumer Protection Act, the federal banking agencies have developed a "Community Bank Leverage Ratio" (the ratio of a bank's tier 1 capital to average total consolidated assets) for financial institutions with assets of less than $10 billion. A "qualifying community bank" that exceeds this ratio will be deemed to be in compliance with all other capital and leverage requirements, including the capital requirements to be considered "well capitalized" under Prompt Corrective Action statutes. The federal banking agencies have set the Community Bank Leverage Ratio at 9%. Actual and required capital amounts and ratios as of the dates indicated are presented below: </div> <div>

Income tax expense is the total of the current year income tax due or refundable and the change in deferred tax assets and liabilities. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases and operating loss and tax credit carryforwards. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date. <span style="background-color: rgb(255, 255, 255); font-weight: normal; color: rgb(0, 0, 0); font-family: 'Times New Roman'; font-size: 10pt; font-style: normal; font-variant: normal; text-transform: none;">

In assessing the realization of deferred tax assets, management evaluated both positive and negative evidence, including any cumulative losses in the current year and the prior two years, the amount of taxes paid in available carry-back years, the forecasts of future income and tax planning strategies.

The ability to use net operating losses (“NOLs”) to offset future taxable income will be restricted and these NOLs could expire or otherwise be unavailable. In general, under Section 382 of the Code and corresponding provisions of state law, a corporation that undergoes an “ownership change” is subject to limitations on its ability to utilize its pre-change NOLs to offset future taxable income. For these purposes, an ownership change generally occurs where the aggregate stock ownership of one or more stockholders or groups of stockholders who owns at least 5% of a corporation’s stock increases its ownership by more than 50 percentage points over its lowest ownership percentage within a specified testing period.

 The Company recorded an income tax expense of $209 thousand for the third quarter of 2024, compared to $39 thousand for the third quarter of 2023. The increase in income tax expense reflected an increase of $628 thousand in pre-tax income between the two periods. The effective tax rate was 27.76% for the third quarter of 2024, compared to 31.20% for the third quarter of 2023.

 For the nine months ended September 30, 2024, income tax expense was $298 thousand, compared to $806 thousand for the nine months ended September 30, 2023. The decrease in income tax expense reflected a decrease in pretax earnings of $1.8 million between the two periods. The effective tax rate was 32.04% for the nine months ended September 30, 2024, compared to 29.49% for the nine months ended September 30, 2023.
