(NASDAQ:Â EU) (TSXV:Â EU) (the "Company" or "enCore"), America's Clean Energy Companyâ„¢, today reports results from the three and nine month periods ended September 30, 2024. enCore continued to enjoy rising revenue due to increasing extraction of uranium and sales of U3O8 ("yellowcake") in the nine months of 2024.Â The Company commissioned the Alta Mesa In-Situ Recovery ("ISR") Uranium Central Processing Plant and Wellfield ("Alta Mesa") late in the second quarter (June 13, 2024 NR) as its second uranium processing plant, making enCore the only company in the United States with two operational uranium processing plants.Â The Company met its delivery commitments under contract with the delivery of 530,000 pounds of yellowcake, using both purchased and processed uranium during the nine month period.Â enCore continued to move its pipeline of projects ahead with permitting activities in South Texas and a drilling program in Wyoming. Nine Month Period Performance Highlights (in USD unless otherwise noted): The Company recorded revenue of \$45 million from the sale of yellowcake; During the nine-month period, the Company extracted and packaged 100,261 pounds of yellowcake combined between its two operational South Texas Central Processing Plants ("CPP"), the Rosita and Alta Mesa ISR projects. Also, the Company delivered 56,551 pounds of yellowcake to a North American Conversion Facility; The Company continues to meet contractual commitments with contract deliveries of 530,000 pounds of yellowcake at an average sales price of \$84.85 per pound; In Q3 2024, The Company entered its eighth uranium supply contract with a U.S. nuclear utility to deliver a total of 300,000 pounds of yellowcake in 2028 and 2029 above current long-term prices presently in the low to mid \$80 per pound range1; The Company conducted resource development drilling work at its Upper Spring Creek Project in South Texas to confirm uranium mineralization for the Company's next wellfield and to explore for roll fronts that may extend from the planned wellfield. Following the approval of the Class III Underground Injection Control ("UIC") permit received in June 2024, the Company began installing the monitor well rings and baseline wells for the first wellfield at the Upper Spring Project. The project is planned to include a satellite ion exchange ("IX") facility and wellfield that will feed the Rosita CPP.

1Â Nuclear Market Review, November 8, 2024, Tradetech, LLC Â The Company conducted resource development drilling work at Alta Mesa in areas near the Alta Mesa CPP and the MesteÂ±a Grande resource area, as reported in the project technical report.2 In Wyoming, the Company conducted resource development drilling on its Dewey-Terrace project area, as well as conducted pre-submittal permit data collection by core drilling on its Gas Hills Uranium Project located in Fremont and Natrona Counties. Â Summary of Select Financial Highlights for the Quarter and Nine Months Ended September 30, 2024 and 2023: (in thousands of US dollars) (CNW Group/enCore Energy Corp.) Revenue Discussion The Company's sales of 530,000 pounds of yellowcake were sourced from both purchased pounds and processed pounds at its Rosita In-Situ Recovery ("ISR") Uranium Central Processing Plant ("Rosita").Â These purchased pounds increased the cost of goods sold.Â As Alta Mesa came online late in Q2 there were no sales of processed pounds from Alta Mesa during the period.Â Revenues are expected to continue to increase throughout 2024, driven primarily by accelerated processing of uranium at Alta Mesa. As volume of yellowcake increases at Alta Mesa, this growth is expected to improve the Company's gross margin. Expense Discussion The increase in expenses is primarily due to activities related to the start-up of Alta Mesa, along with exploration and development efforts across several states. As both Alta Mesa and Rosita are in the early stages of start-up, they have incurred expenses and increased capital investments, both which are essential for fully realizing our growth strategy and achieving enCore's operational capacity.

2Â "Technical Report Summary for the Alta Mesa Uranium Project, Brooks and Jim Hogg Counties, Texas, USA; National Instrument 43-101, Technical Report," prepared by Douglas Beahm, PE, PG, BRS Inc. Riverton, Wyoming, January 20, 2023. Â Operations Performance Through the nine-month period, the Company observed increasing volume from both operating CPP's, primarily from Alta Mesa as the ramp up continues. The Company packaged 100,261 pounds of yellowcake during that period from the combined operations. Development drilling and wellfield installation continued at Wellfield 7 at Alta Mesa to support expansion through a second IX circuit at the CPP. During the quarter, wellfield solution head grades at Alta Mesa peaked at approximately 140 mg/L U3O8 and averaged approximately 65 mg/L U3O8. The Company began resource development drilling to identify and classify additional mineral resources for additional wellfields beyond Wellfield 7. In South Texas, development drilling progressed on an expansion area adjacent to the planned wellfield at our Upper Spring Creek ISR Project that we expect will extend the volume of yellowcake for processing at the Rosita CPP. Following the approval of the Class III UIC permit for the Upper Spring Creek wellfield, monitor well installation commenced to advance the project to provide satellite IX feed for the Rosita CPP in 2025. Additionally, key materials, equipment and vessels have been ordered and staged in anticipation of commencing satellite IX facility and wellfield construction upon approval by the Texas Commission on Environmental Quality ("TCEQ") in early 2025. Â Outlook and Subsequent Events The Company's outlook is positive, with substantial and growing revenue from Alta Mesa contributing to financial results throughout the first nine months of 2024 and beyond, as additional production and extraction wells come online. The cost-to-revenue ratio is projected to decline, reflecting improved efficiency and profitability as the Company accelerates activities at Alta Mesa and, to a lesser extent, at Rosita for the remainder of the year.Â This trend is projected to accelerate as the Company expects to process in excess of one million pounds a year in 2025. Additional plant feed for Rosita will be developed at the Upper Spring Creek Project where the Company has submitted various permit and amendment applications to the regulatory authorities in anticipation of a late first half start-up in 2025.Â The nuclear industry outlook remains extremely positive with demand projections outpacing supply for the foreseeable future driven in part by increased electrical demand from Artificial Intelligence ("AI") and the commitment of many sectors of the economy to achieve zero carbon. Continued primary uranium production supply disruptions and constraints continue on a global basis as geopolitical tensions, trade restrictions, and local government decisions are observed. Current contracting conditions continue to remain favorable, with term contract pricing now higher than at the current spot price of \$77.00 per pound.Â Current contracting prices are higher Â than when the spot price reached its twelve-month high of \$115 per pound U3O83.

3Â Nuclear Market Review, February 2 and November 1, 2024, Tradetech, LLC Â Qualified Person John M. Seeley, Ph.D., P.G., C.P.G., enCore's Manager of Geology and Exploration, and a Qualified Person under NI 43-101, has reviewed and approved the technical disclosure in this news release on behalf of the Company. Shareholder Information The Company's full quarterly and annual filings are available on SEDAR+ at www.sedarplus.ca, on the U.S. Securities and Exchange Commission's EDGAR website at www.sec.gov and on enCore's website at www.encoreuranium.com.Â Financial results were prepared in accordance with International Financial Reporting Standards, as issued by the International Accounting Standards Board.
